DualLens Field Notebook - Page 1

Observation 1: Morning light reaches the quiet garden.
Small leaves collect clear drops after the passing rain.
Our team records each change and compares the measurements.

Experiment 1: We place a paper marker near the stone path.
The marker stays dry while the nearby soil holds moisture.
Careful notes help future readers understand our methods.

This original fixture contains no private or borrowed content.
Translation appears only when a reader asks for nearby text.

End of page 1. The next page continues the field notebook.
